## Introduction

- I am an industrious and disciplined person, belonging to Haryana, India, who aims to become a better technical and analytical person with the desire to learn new things constantly. I like to take on challenges and seek effective solutions that are practical and working based on clarity of thought and consistency. I practice honesty and responsibility, and I also dedicate concentration and commitment to every job I do to attain good results. I am a very interested person in technology, more precisely in Artificial Intelligence, and I am wondering how AI can be applied to address real-life issues and streamline life. I intend to establish my career in AI as an engineer who finds practical and effective solutions to bring about a positive change, and I hope that with practice and the desire to learn more, I will become a competent professional in the sphere.

## Education

**Chandigarh University** — Gharuan, Punjab
*Bachelor of Engineering in Computer Science with specialization in AI-ML, 3rd Year - Present* — *2026 – CGPA : 6.69*

**St. Francis Xavier School, Talwandi Rana, Hisar** — Hisar, Haryana
*Class 12th* — *March 2023 (72.2%)*

**St. Francis Xavier School, Talwandi Rana, Hisar** — Hisar, Haryana
*Class 10th* — *March 2021 (75.4%)*

## Projects

**Smart Dustbin with Advanced Features** | *Arduino, Solar Panels, Sensors* — Jan. 2024 – May 2024

- Designed a smart dustbin that has motion sensors built into it using Arduino that uses motion sensors to open the lid automatically, making it hands-free when disposing of waste.
- Added simple AI-driven decision processing to solve sensor response and enhancement in the detection of user presence.
- To improve hygiene and prevent breeding of mosquitoes, a built-in mosquito repellent system was installed.
- Solar panels were integrated to make the generation of power sustainable and autonomous.
- As a clean device, developed to reduce the chances of contamination by touch-free and smart communication.

**Laser Beam Security System** | *Arduino, Sensors, Buzzer System* — November 2024

- Created a laser beam security system with the help of Arduino and a sounding system to alert of illegal entry.
- Pattern recognition with the use of applied basic AI to distinguish between normal disturbance and a threat.
- Used sensor processing techniques to improve detection accuracy and prevent false alarms.
- Made a fully functional prototype demonstrating intelligent sensor-based security system.

**Social Internship** | *Village Khedar, Haryana* — June 2024

- Collected and analyzed data for a four-week study on village healthcare, education, and infrastructure.
- Used fundamental data analysis methods to pinpoint important problems and offer workable, data-driven solutions.
- Led awareness campaigns about self-help groups to increase financial independence and empower local women.
- Worked together with the PU Foundation on community projects, such as digital outreach, plantation drives, and assistance programs.

## Technical Skills

- **Programming Languages:** Python, C/C++, SQL (PostgreSQL), R
- **Development Tools:** VS Code, Google Colab, Visual Studio
- **Libraries and Frameworks:** pandas, NumPy, Matplotlib

## Certifications

**Azure AI Fundamentals** | *Microsoft* — November - 2025

- An introductory course that covers the fundamentals of artificial intelligence and how to use Microsoft Azure services to implement AI solutions.
